SUMMARY: ICE AIR'S VERTICAL STACK WATER SOURCE HEAT PUMP SYSTEMS PROVIDE HIGH-ENERGY EFFICIENT HEATING AND COOLING AT THE INDUSTRY'S BEST SOUND LEVELS

MT. VERNON, NY – Vertical Stack Water Source Heat Pumps (VSWSH) from ICE AIR are ideal for new construction or retrofit applications in the hospitality industry or any application where high levels of energy efficiency and cooling and heating are required.

ICE AIR's VSWSH units offer the smallest footprint in the industry, advanced controls, the industry's best sound levels and 13+ Energy Efficiency Rating. The units are designed and manufactured to operate on standard 115 volt or 208/203 volt, single phase, 60 Hertz circuits. Optional 265/277 volt, 60 Hertz or 220 Volt, 50 Hertz units are available.

The VSWSH chassis consists of a sealed refrigerant system, an evaporator section with PSC motor and a coaxial heat exchanger condenser section, and either digital unit mount or wall mount controls. The sealed refrigerant system uses Puron® R401A refrigerant exclusively. In addition, the VSWSH's feature dual freeze protection and a permanent washable aluminum mesh filter. Models are ETL listed for safety in the United States and Canada, meet required building codes and Federal Energy Efficiency requirements and are tested to current ARI standards.

These units are an economical and energy efficient method to meet all of your building's heating, ventilating and air conditioning needs.

ICE AIR, with over 35 years of industry experience, develops and manufactures a wide variety of HVAC units to provide superior new construction heating and cooling systems and to replace old installations. The company's world headquarters are in Mount Vernon, New York. Ice Air offers advanced green technologies, environmentally sound "green" refrigerant, and provides world class comfort at high efficiency levels, meeting environmental standards and promoting a healthy environment.
